

COMBATTM

Enhance your existing Loss Prevention program with the world's most powerful ORC tool - the **COMBAT**. It is the most sophisticated and technologically advanced ORC equipment on the market and available for immediate installation. **COMBAT** easily integrates with any EAS system - regardless of brand.

Every **COMBAT** system comes with a standard warranty on parts and labor. In addition, USS offers optional maintenance contracts, which include remote equipment monitoring, system adjustments, and other technical measures to ensure proper system operation.

1. Booster Bag Detector

Inventory shrinkage wreaks havoc on shelf availability and inventory accuracy. The **COMBAT** design includes an automated detection system specifically targeting booster bags. The D.S.D. (Digital Signature Detection) instantly triggers the alarm, immediately notifying store personnel of booster presence.

2. Jammer Detector

EAS jamming devices have a severe impact on retailer's profit margins. Remote jammers are used more frequently among thieves as a method to breach security. These jamming devices prevent the EAS systems ability to alarm. The **COMBAT** is armed with an anti-jamming alarm circuit, which detects the use of jamming devices. It triggers the alarm and notifies store personnel immediately.

3. Detacher Detector

Stop criminals before they have the opportunity to steal your inventory. The **COMBAT** detects magnetic detachers brought into the store by criminals with the intention to remove EAS tags from merchandise. The system gives store personnel advanced warning when a magnetic detacher is within range.

plus Command Post

The **COMBAT** uses state of the art infrared sensors to transmit, monitor and translate actual EAS and ORC events. Designed to integrate with most DVR's, it empowers retailers with real-time EAS knowledge of false alarms, failure to remove, incoming tag pollution, and all ORC event logs. The command post is also equipped with M.I.S. (Management Information System) technology for intelligent store traffic and conversion rates.

Notification Options

COMBAT can be programmed to alert employees in multiple ways:

- Visual and Audible Alarm on Pedestal
- Notification Sent Via Pager (Vibrating)
- Voice Enunciator
- Time Stamp Event
- CCTV - Image Frames Recorded at a Higher Rate Per Second

Product Specs

- Dimensions: 64" H x 6.5" W x 2.5" D
- Weight: 11lbs.
- Supply Voltage: 100-120 VAC @ 60Hz
- Two Pedestals: 6 ft. Coverage
